### **DETAILED ACTION**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “a temperature sensor” in claim 2 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2821

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Cok et al (US 2004/0070558)

The applied reference has common inventors with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

With respect to claim 1, Cok discloses, in Figs. 3-5, an organic light emitting diode (OLED) display, comprising:

- a) an array of OLEDs (10), each OLED having two terminals;
- b) a voltage sensing circuit for each OLED including a transistor (12) in each circuit connected to one of the terminals of a corresponding OLED for sensing the voltage across the OLED to produce feedback signals (19) representing the voltage across the OLEDs; and
- c) a controller (26) responsive to the feedback signals (19) for calculating a correction signal (24) for each OLED and applying the correction signal to data used to drive each OLED to compensate for the changes in the output of each OLED.

With respect to claim 2, Cok further discloses the output of the OLEDs change with temperature, and further comprising a temperature sensor (60 in Fig. 6) for generating a temperature signal and wherein the controller is also responsive to the temperature signal to calculate the correction signal.

With respect to claim 3, Cok discloses the controller (26) further including a lookup table (page 6, claim 3) having a correction signal for each of the OLEDs.

With respect to claims 4-5, Cok discloses the controller sequentially activating individual OLED to measure the voltage associated with each OLED element (paragraph [0039]), and the controller activating one or more OLED elements at a plurality of different brightness levels to calculate the correction signal (paragraph [0044]).
